JOB MARKET PAPER

Parent-Level Debt and Subsidiary-Level Risk-Taking Evidence from Large Bank Holding Companies. 2026. **To be submitted in December 2026.**
(with Kebin Ma, David R. Skeie, and Jianlin Wang)
We study how a bank holding company's (BHC) parent capital structure affects subsidiary bank risk-taking. Higher parent debt is associated with lower subsidiary bank risk-taking. To establish causality, we exploit the U.S. introduction of the single-point-of-entry (SPOE) resolution strategy and total loss-absorbing capacity (TLAC) requirements. Large BHCs that are not global systemically important banks (GSIBs) were unexpectedly exempted from the associated parent-level debt requirements; these BHCs reduced their parent debt, and their subsidiary banks increased risk-taking. A model in which parent debt is partly downstreamed as bank equity explains these findings: parent debt curbs subsidiary bank-level risk-taking while the parent remains solvent, but increases it once the parent would default alongside its subsidiary bank.

WORKING PAPERS

1. Monetary Policy and Deposit Beta: The Role of Internal Capital Market. 2025.
This paper introduces a novel Internal Capital Market (ICM) channel—proxied by the parent debt ratio—to explain how Bank Holding Companies (BHCs) shape the transmission of monetary policy to their subsidiary banks. Using deposit beta as the primary measure of rate-setting behavior, I find that a higher parent debt ratio is significantly associated with lower deposit betas, indicating that ICMs function as a stabilizing force against policy rate fluctuations. Two distinct mechanisms underpin this relationship. First, a funding substitution effect, where internal capital transfers from the parent to its subsidiary banks reduce subsidiary banks' dependence on traditional deposits, thereby granting them greater flexibility in setting deposit rates. Second, a risk-mitigation effect, in which higher parent debt ratio and cross-guarantee provisions incentivize the parent company to limit subsidiary bank's risk-taking, reducing the risk premiums demanded by depositors. Taken together, these findings suggest that parent company debt meaningfully weakens the sensitivity of deposit rates to monetary policy. Furthermore, parent debt can serve as an effective instrument for managing the capital adequacy of subsidiary banks.

2. Bank ESG Performance and Lending Behavior in the Mortgage Market. 2023.
   This paper investigates whether banks' environmental, social, and governance (ESG) ratings influence their mortgage lending decisions toward minority groups. Initial OLS estimates suggest that banks with higher ESG ratings issue fewer mortgage loans—in both volume and number—to minority applicants. However, these patterns may be driven by omitted variables related to borrower creditworthiness or reverse causality. To address endogeneity, I employ an instrumental variable analysis using the political leanings of the counties where bank branches are located. The IV results confirm that banks' ESG practices have no causal impact on mortgage lending decisions. I propose an "irrelevance mechanism" to explain these findings, noting that mortgage decisions are largely automated through Government-Sponsored Enterprises (GSEs) and that ESG metrics often prioritize internal staff diversity over customer-facing lending practices.

PRESENTATIONS

2025: 38th Australasian Finance and Banking Conference (UNSW Business School); Beijing Capital University of Economics and Business; Warwick Business School Brown Bag Series
2024: Warwick Business School Brown Bag Series
2023: Warwick Business School Brown Bag Series

TEACHING EXPERIENCE

University of Warwick, Warwick Business School *2021- 2025*
Postgraduate level
IB92CA: Corporate Finance *2021*
Undergraduate level
IB2360: Corporate Finance *2023, 2025*
IB2350: Financial Markets *2022,2023, 2024*
IB3J80: Banking and Financial System *2022*
IB2D90: Finance in Practice *2023*
IB1320: Foundations of Finance *2023*

FELLOWSHIPS, HONORS, AND AWARDS

University of Warwick WBS Scholarship *2020- 2024*
Tsinghua University Star of Reader *2018*
UIBE Excellent Master Dissertation *2016*
UIBE Academic Scholarship *2015- 2016*
UIBE Freshmen Scholarship for Master *2014- 2015*
Henan University Outstanding Graduate *2012*
NECCS Committee Third Prize, National English Contest of College Students *2010*
Henan University First Class Scholarship, Excellent Student, Outstanding Class Leader *2009-2011*

SKILLS

Software & Tools: STATA, Python, MATLAB, LaTeX
Languages: Chinese (native), English (fluent)
